## Welcome 2010

As this is the first newsletter for the year, we would love to take the opportunity to welcome everybody back from their 2009 December holiday, and we trust that everybody, returned in good health and high spirits

As this is 2010 and we stand on the edge of one of the most important events South Africa has ever had the pleasure to host, the soccer world cup, and so we have decided to get a little bit high tech, we would love to formally invite all of our customers to join us on Twitter ([www.twitter.com/PHDpowerhouse](http://www.twitter.com/PHDpowerhouse)) . We will be using twitter as a mass medium for communicating specials, important events and useful tips to ensure that all your UPS, voltage stabiliser and lightning and surge protection needs will be satisfactorily met. So come on 2010 !

Next month we have a very exciting issue, we will be compiling all of our lead stories and the highlights of our 2009 live wire issues into a tribute edition as we say good by to the exciting or be it difficult year 2009

### Electric fence protection

Powerhouse Distribution is pleased to announce the release of our latest surge protection product – the Electric Fence Protection unit. By integrating the protection for the HT and the Mains into a single easy to install unit we are able to provide exceptional levels of protection. In addition to applying equi-potential bonding principles an earth potential equalisation element is also included. The units are currently in production and will be available for sale early in February 2010.

### Complete home - office surge protection

Don't be caught without this essential piece of potentially life saving equipment, designed to remove high spikes and surges from entering your installation from your incoming mains, for more information call PHD today!
